

Standard 9: Assessment of Learning

The provider in collaboration with faculty must include learning assessments in each CPE activity to allow pharmacists and technicians to assess their achievement of the learned content. Completion of a learning assessment is required for CPE credit.

Guidance:

The provider may select formal and informal techniques for assessment of learning. Informal techniques typically involve participant discussions. Formal techniques, such as tests and quizzes, are typically individualized, written, and graded. The assessment should be consistent with the identified CPE activity objectives (Standard 4) and activity type (Standard 3).

Knowledge-based CPE activity: Each CPE activity in this category must include assessment questions structured to determine recall of facts.

Application-based CPE activity: Each CPE activity in this category must include case studies structured to address application of the principles learned.

Certificate program: Each CPE activity in this category must include formative and summative assessments that demonstrate that the pharmacists and technicians achieved the stated objectives.
